

v2.2.1 Release Notes

Itemized BOM

- Component BOM and Wire BOM are now updated with AG Grid functionality.
- Users can now experience enhanced performance with the same details in BOM as earlier versions.
- Users can now group, filter, hide, sort, pin based on different columns in both the BOMs.
- Users can now experience faster exports with the same details. The data can also be exported along with grouping, filtering, sorting and pinning done on the screen.

Switch Assemblies

- Users are able to intuitively switch assemblies from one type to another from right click properties.
- Orientation of assembly placement is maintained when switching from one assembly to another.
- Connections are preserved depending on user input when switching between electrical assemblies.
- Multiple assemblies can be selected and switched at once

Smart Count improvements

- Sheets are now converted to higher resolution ones to get more accurate and fewer false positive results.
- State management of review screen is now improved. Results on the grid on review screen will be in sync with the results shown on pdf viewer on the review screen.

Auto placement assemblies

- The workflow to review the results has been updated to make it in sync with smart count review functionality. Filled circle now represents the selected ones and unfilled represents non-selected ones.

View all tab improvements

- Filter or search menu can now be closed by clicking outside of the menu.
- The unnecessary right click chrome menu has been removed from AG Grid.
- The bulk edit button will now be disabled if any of the columns are grouped.
- Users are able to view data from all sheets
- Connections and Connection Properties are present in View All Tab
- Parts list is now on the view all tab and users are able to edit components and quantities directly.

v2.2.1 Bug Fixes

- Search is now working in Thumbnails – list view.
- The deleted scopebox will disappear automatically with manual refresh.
- The issue where color of the scopebox was changing automatically has now been fixed.
- Hide and show dimensions from 2D toolbar settings is now working properly.
- The issue with paste operation where users paste the assemblies and connections on the corner of pdf sheet has been fixed.
- The unnecessary Import settings button in project settings has now been removed.
- The issue where the tag leaders were disappearing when the users click on annotation tag by pressing “Shift” key has now been fixed.
- The 2nd version of pdf sheet will now be visible without doing manual refresh.
- The issue where annotation tag settings radio buttons were not working to show / hide tags has now been fixed.
- The issue where incorrect scopebox values were getting updated in the connections has now been fixed.
- The issue where assembly properties update was not working when the user clicks anywhere on sheet canvas while updating assembly properties & then clicked on Save button been fixed.
- Show unconnected device functionality is now working seamlessly.
- The issue where there was some gap between connections and assembly has now been fixed.
- The issue where users were unable to view assemblies' properties after adding / deleting the part list has now been fixed.
- The issue in view all tab where users were unable to export the data if project name has special characters in it has now been fixed.
- The issue where users were unable to export BOM if the filter is applied on” Feed From” and” Feed To” has now been resolved.
- The issue where users were unable to move assemblies after selecting connections has now been resolved.
